ANEXO

RESUMEN DEL PROGRAMA DE MANEJO DE LA RESERVA DE LA BIOSFERA TEHUACAN - CUICATLAN

La Reserva de la Biosfera Tehuacán-Cuicatlán, ubicada en los estados de Puebla y Oaxaca, se estableció mediante Decreto Presidencial publicado en el Diario Oficial de la Federación el dieciocho de septiembre de mil novecientos noventa y ocho, con una superficie de 490,186-87-54.7 hectáreas. En la Reserva de la Biosfera Tehuacán-Cuicatlán, debido a su compleja topografía y elevación, se encuentran zonas con una gran diversidad de hábitats y ambientes propicios como refugios de flora y fauna, así como más de 3,000 especies de plantas y animales superiores por lo que es considerado centro de biodiversidad mundial, asimismo, en la región de Tehuacán-Cuicatlán se encuentran diversos tipos de vegetación, tales como el bosque tropical caducifolio, bosque espinoso, bosque de encino, bosque de pino-encino, pastizal y matorral xerófilo; así como algunas especies de plantas consideradas como endémicas.

OBJETIVOS GENERALES Y ESPECIFICOS DEL PROGRAMA DE MANEJO**Objetivo general**

Constituir el instrumento rector de planeación y regulación que establece las actividades, acciones y lineamientos básicos para el manejo y la administración de la Reserva de la Biosfera Tehuacán-Cuicatlán.

Objetivos específicos

Protección. Favorecer la permanencia y conservación de la diversidad biológica de la Reserva de la Biosfera Tehuacán-Cuicatlán, a través del establecimiento y promoción de un conjunto de políticas y medidas para mejorar el ambiente y controlar el deterioro de los ecosistemas.

Manejo.- Fomentar la ejecución de actividades y acciones orientadas al cumplimiento de los objetivos de conservación, protección, restauración, capacitación, educación y recreación de la Reserva de la Biosfera Tehuacán-Cuicatlán a través de proyectos alternativos y la promoción de actividades de desarrollo sustentable.

Restauración.- Recuperar y restablecer las condiciones ecológicas previas a las modificaciones causadas por las actividades humanas o fenómenos naturales, permitiendo la continuidad de los procesos naturales en los ecosistemas de la Reserva de la Biosfera Tehuacán-Cuicatlán.

Conocimiento.- Generar, rescatar y divulgar conocimientos, prácticas y tecnologías, tradicionales o nuevas que permitan la preservación, la toma de decisiones y el aprovechamiento sustentable de la biodiversidad de la Reserva de la Biosfera Tehuacán-Cuicatlán.

Cultura.- Difundir acciones de conservación de la Reserva de la Biosfera Tehuacán-Cuicatlán, propiciando la participación activa de las comunidades aledañas que generen la valoración de los servicios ambientales, mediante la identidad, difusión y educación para la conservación de la biodiversidad que contiene.

Gestión.- Establecer las formas en que se organizará la administración de la Reserva de la Biosfera Tehuacán-Cuicatlán, y los mecanismos de participación de los tres órdenes de gobierno, de los individuos y comunidades aledañas a la misma, así como de todas aquellas personas, instituciones, grupos y organizaciones sociales interesadas en su conservación y aprovechamiento sustentable.

DELIMITACION, EXTENSION Y UBICACION DE LAS SUBZONAS**Zonificación y subzonificación**

De conformidad con lo establecido en la fracción XXXVIII del Artículo 3 de la Ley General del Equilibrio Ecológico y la Protección al Ambiente, la zonificación es el instrumento técnico de planeación que puede ser utilizado en el establecimiento de las áreas naturales protegidas, que permite ordenar su territorio en función del grado de conservación y representatividad de sus ecosistemas, la vocación natural del terreno, de su uso actual y potencial, de conformidad con los objetivos dispuestos en la misma declaratoria. Asimismo, existirá una subzonificación, la cual consiste en el instrumento técnico y dinámico de planeación, que se establecerá en el programa respectivo, y que es utilizado en el manejo de las áreas naturales protegidas.

En la declaratoria de la Reserva de la Biosfera Tehuacán-Cuicatlán se estableció un polígono general, es decir, no se estableció una zonificación (zona núcleo y zona de amortiguamiento), por lo que las subzonas establecidas a través del presente instrumento se determinaron con base en los criterios aplicables a la categoría de manejo conforme a lo establecido en los artículos 47 BIS, 47 BIS 1 y 48 de la Ley General del Equilibrio Ecológico y la Protección al Ambiente.

Criterios de Subzonificación

Los criterios técnicos considerados para subzonificar la Reserva de la Biosfera partieron de la información disponible sobre aspectos físicos (topografía, cuencas hidrológicas, suelos y elementos paisajísticos), biológicos (ecosistemas, comunidades vegetales, grado de conservación y la distribución de especies con alguna categoría de riesgo de acuerdo a la Norma Oficial Mexicana NOM-059-SEMARNAT-2010, Protección ambiental-Especies nativas de México de flora y fauna silvestres-Categorías de riesgo y especificaciones para su inclusión, exclusión o cambio-Lista de especies en riesgo).

Por otro lado, y no menos importante, son los reportes científicos, los cuales han logrado determinar sitios de interés biológico-ecológico, como las áreas de distribución de especies endémicas, nuevos registros de especies y poblaciones tipo para la región, información que ha representado un importante criterio para la determinación de la subzonificación.

Considerando que la región de Tehuacán-Cuicatlán ha estado ocupada por distintos grupos humanos desde la época prehispánica, es importante considerar como un criterio adicional a las comunidades y sus

actividades productivas tradicionales, así como la tenencia de la tierra. En este sentido y con el propósito de orientar el uso sustentable del territorio, consolidar los usos presentes que sean compatibles con las cualidades y aptitudes del mismo y/o buscar alternativas para aquellas áreas en que el uso sea inadecuado y se manifiesten conflictos. Se aplicó la metodología para el análisis del estado de conservación de la Reserva de la Biosfera realizando la evaluación del uso del suelo, de acuerdo a la metodología propuesta por la Organización para la Agricultura y la Alimentación (FAO, por sus siglas en inglés) (1976) que a continuación se describe:

Tipos de Utilización de la Tierra (TUTs)

Debido a la extensión y al tipo de tenencia de la tierra de la Reserva de la Biosfera, se aplicó primero la propuesta de Tipos de Utilización de la Tierra, apropiados a una escala estatal, ofrecida por Massiris "en la metodología para la elaboración de los Programas Estatales de Ordenamiento Territorial de la SEDESOL (2004)", se eligieron sólo seis Tipos de Utilización de la Tierra: 1. Bienes y Servicios ambientales; 2. Turismo; 3. Silvicultura; 4. Agroforestería; 5. Agricultura; 6. Silvopastoreo, que a juicio de los investigadores que han trabajado en la Reserva de la Biosfera y técnicos de campo de la misma, constituyen alternativas viables dado el carácter del área natural protegida.

La segunda etapa metodológica consistió en determinar los requerimientos físicos, económicos y sociales de cada uno de los Tipos de Utilización de la Tierra elegidos. Los requerimientos físicos se establecieron a partir de criterios de los investigadores para identificar los umbrales para cada uno de los Tipos de Utilización de la Tierra. Se tomaron como carta base de trabajo la cartografía (INEGI, 1991) considerando las pendientes, precipitación, deterioro, tipo y cobertura vegetal. Esta información se generalizó mediante la definición de categorías para obtener la cartografía sobre la aptitud natural de las unidades territoriales, para lo cual, se diseñaron los árboles de decisiones.

El manejo de la información capturada se basa en el método de análisis de situaciones, conceptos acuñados en la antropología del espacio (Pesci, 2000), al cual se le añadieron los conceptos de pertinencia e interés social como variables indicadoras del nivel de permisibilidad y la aceptación para cada uno de los tipos de utilización de la tierra con base a sus situaciones.

La tercera etapa consistió en la identificación de unidades de paisaje. En este contexto se considera que las áreas naturales protegidas poseen superficies amplias y heterogéneas con escenarios diversos en relación al aprovechamiento, uso y conservación de los recursos naturales. Administrar estos espacios eficientemente implica conocer y definir sitios homogéneos en función de sus características naturales y sociales que permitan darles un manejo diferenciado.

La cuarta etapa consistió en la confrontación de los requerimientos de cada unidad de paisaje para definir la aptitud de cada tipo de utilización de la tierra.

Como resultado de la metodología aplicada tenemos que las subzonas que se apegan a los tipos de utilización de la tierra definidos, son las que a continuación se describen:

En esta subzona se ha llevado a cabo el uso agropecuario, predominando la ganadería caprina que se ha desarrollado desde la época de la Colonia. En cuanto a la agricultura se practican los cultivos de temporal (el maíz, frijol, calabaza, trigo, amaranto y cebada) en parcelas regularmente rodeadas de vegetación nativa perturbada como matorral xerófilo con vegetación secundaria, remanentes de bosques de encino, encino-pino, bosques de cedro (*Juniperus sp*) y en baja proporción pastizal inducido y un alto porcentaje de áreas sin vegetación aparente.

También se desarrolla la agricultura de riego, las hortalizas son las más cultivadas y abastecen de vegetales a los mercados de Tepeaca, Huixcolotla y la misma ciudad de Tehuacán.

En la zona de ingreso a la cañada oaxaqueña desde Coxcatlán en la rivera del Río Salado hasta Tecomavaca, Oax., predomina el cultivo de caña de azúcar, para abastecer al ingenio Calipan del municipio de Coxcatlán, Pue. En la cañada oaxaqueña específicamente en terrenos de la vega de la zona de inundación del Río Grande se realizan cultivos importantes de cítricos como naranja y limón, así como papaya, mango, sandía, melón y zapote negro.

En la región de la Mixteca Coixtlahuaca, se cultivan frutales como la pera, manzana y durazno.

Zona de Influencia de la Reserva de la Biosfera Tehuacán-Cuicatlán.

Las áreas naturales protegidas no son espacios cerrados, éstas mantienen una estrecha interacción social, económica y ecológica con superficies aledañas a la poligonal, por lo que para la mejor comprensión y manejo se ha definido para la reserva de la biosfera Tehuacán-Cuicatlán una zona de influencia que está conformada por la superficie de los municipios listados en la descripción limítrofe de su declaratoria, pero que se localiza fuera de la poligonal general del área natural protegida, ya que algunos municipios sólo tienen una pequeña porción de su territorio dentro de dicha poligonal.

La zona de influencia se ubica entre las coordenadas geográficas extremas señaladas en la tabla siguiente. Comprende aproximadamente 324,045-46-00 ha., que rodea el contorno del polígono de la Reserva de la Biosfera Tehuacán-Cuicatlán, de tal manera, que forma una franja perimetral variable que fluctúa de 3.5 a 31.5 km abarcando los 51 municipios considerados en la declaratoria.

Coordenadas extremas de la zona de influencia

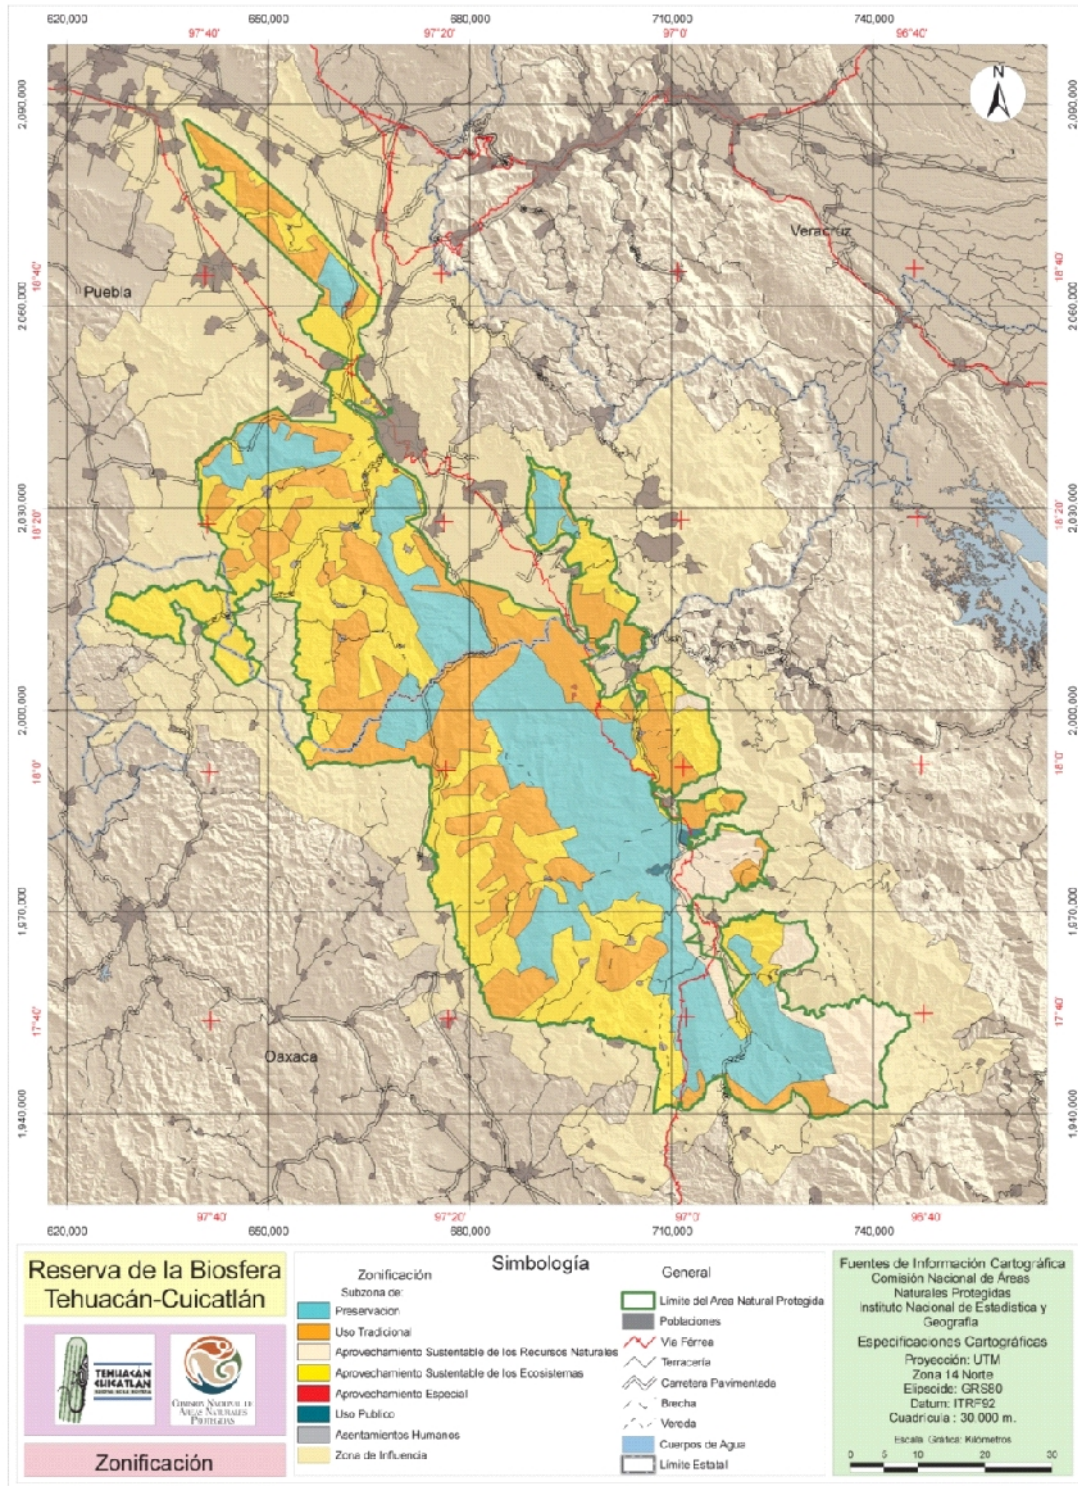

Zona	Latitud	Longitud
Norte	18° 57' 55"	97° 32' 30"
Sur	17° 26' 20"	96° 53' 08"
Este	18° 28' 58"	96° 51' 42"
Oeste	18° 06' 09"	97° 51' 38"

Este espacio ejerce una fuerte influencia sobre la biodiversidad y recursos naturales de la Reserva de la Biosfera, sobre todo en aquellas zonas de alta concentración de población. Las actividades económicas al igual que en la poligonal de la Reserva de la Biosfera son de carácter primario y secundario donde los centros de población más grandes como Tehuacán, Ajalpan, Tecamachalco, Tlacotepec de Benito Juárez, Teotitlán de Flores de Magón, San Juan Bautista Cuicatlán, San Juan Bautista Coixtlahuaca, San Juan Bautista Nochixtlán son los sitios donde las poblaciones acuden a la comercialización de sus productos y abastecimiento de productos básicos.

Debido a las actividades agrícolas y pecuarias en la zona de influencia hay áreas muy degradadas, principalmente por la denudación que ocasiona el sobre pastoreo, el cambio de uso de suelo para actividades agrícolas o el crecimiento de la mancha urbana de los principales centros de población.

Algunas localidades se encuentran fuera de la poligonal; sin embargo, son propietarias de la tierra dentro del área natural protegida por lo que hacen uso de los recursos naturales que se protegen, de manera consciente o no se ocasionan daños en el ecosistema, sea por el tipo de ganadería extensiva que se practica en la zona, o por que la población de las comunidades aledañas al área natural protegida acostumbran la recolección de plantas silvestres para autoconsumo y venta (medicinales, alimenticias, construcción, leña, etc.) en las plazas de los centros de población antes mencionados.
